

bmf[®] Metal Forms

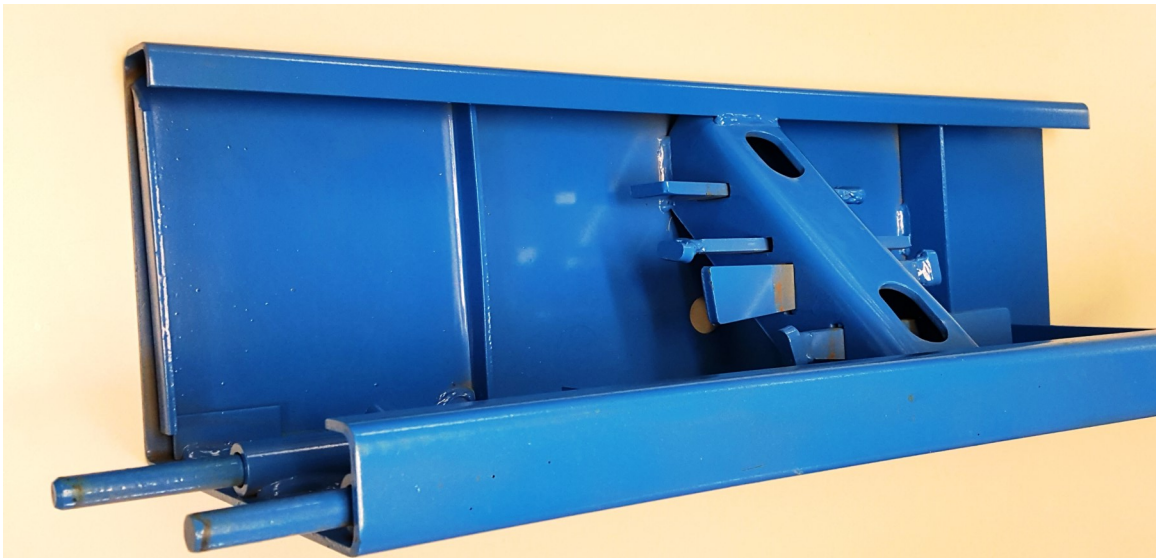

Dual Purpose/Flip Flop Paving Form

Dual Purpose Paving Forms, commonly known as Flip Flop Paving Forms provide two paving heights in one form, thus saving in cost and in project paving time.

Flip Flop Forms can be made in many variations to accommodate most any paving requirement .

Barrel Bolts end connections provide absolute alignment, while 3 stake pockets per side assure that no movement will occur during pour or while being used with a paving machine or screed.

Flip Flop Forms are available in 3/16" and 1/4" thicknesses
